

QObject

QObject

VideoPlayer

```
classDiagram
    class QObject1[QObject]
    class QObject2[QObject]
    class VideoPlayer
    VideoPlayer --|> QObject1
    VideoPlayer --|> QObject2
```

The diagram illustrates a class hierarchy where a single class, VideoPlayer, inherits from two separate classes, both of which are named QObject. The VideoPlayer class is positioned at the bottom, and two arrows point upwards from its top edge to the bottom edges of the two QObject classes above it. This represents multiple inheritance.
